What battery types are most commonly used in portable power stations? There are various battery technologies, but the main ones used in portable power stations today are types of lithium-ion (Li-ion) batteries, often lithium nickel manganese cobalt oxide (Li-NMC) or lithium iron phosphate (LiFePO₄ or LFP). What is the best portable power station? By far the most portable power station in our guide, the EcoFlow River 2 Pro weighs just 17 pounds and has a large handle along the back. The LiFePO₄ battery inside is good for 768 watt-hours, and I managed to squeeze a little more out of it in my tests. The ports are great for camping trips, with everything you need to charge small gadgets. Should you buy a portable power station? The term "portable" is stretching it sometimes. Batteries are heavy. The larger-capacity power stations are typically on wheels and have telescopic handles, and they are still tough to cart around. If you're looking for something you can actually carry on foot for a distance, you may need to temper your expectations on capacity. What is the best power station for camping? Whether you're camping for the weekend, living off-grid, or protecting against power outages, these big batteries can help. There's no such thing as the best power station for most people, because it depends on what you need, but I have spent months testing several to find which models work for certain situations. What can a portable power station charge? All portable power stations can charge up small gadgets like phones and laptops or be used to power lighting. Most can handle small appliances like mini-fridges or TVs. If you want to use power tools, an AC unit, or in the UK, a kettle, you need to be able to draw thousands of watts.
