UPS uninterruptible power supply can be connected in parallel

What is Uninterruptible Power Supply UPS Each UPS requires a 'parallel' interface board fitting. If one of the units fail the load will be dropped back to bypass as they are in effect working as a Parallel UPS systems Jan 14, Parallel UPS modules can seamlessly share the load and automatically take over for a failed module without disrupting power quality to the critical load, and without unduly What's The Difference Between Parallel Capacity (N) And Parallel-Capacity (N) Ups SystemsParallel-Redundant (N+X) Ups SystemsOther Redundant Ups ConfigurationsFurther Reading'N+X' configuration solutions are commonly used to protect mission-critical applications in data centres, industrial sites and larger business operations. The main principle behind a parallel-redundantUPS system is that it can continue to support the critical load should one or more UPS modules fail. Compared to N capacity installations, this meansSee more on riello-ups
