3.7v lithium battery cylinder

What is a 3.7V lithium ion cylinder battery? Adafruit Industries, Unique & fun DIY electronics and kits Lithium Ion Cylindrical Battery - 3.7v 2200mAh : ID - Need a big battery for your project? This lithium-ion battery contains a 2200mAh and a protection circuit that provides over-voltage, under-voltage, and over-current protection. What is a 7.4 volt lithium battery? Manufacturer of custom 7.4 v rechargeable battery. 7.4v lithium battery pack made by 2S lithium batteries in series. The most simple one is 2-cell battery pack. We provide different cell like li ion 18650 cells, lithium 26650 cells, liion 32650 or lithium polymer. 2S 7.4 volt lipo battery mostly used for RC. It is possible for high rate discharge. What are the chemicals used in a 3.7 volt battery? A 3.7 volt battery is made up of lithium, manganese, and cobalt chemicals. These chemicals work together to create a charge that can be used to power devices. What does 3.7V mean on a battery? What this means is that the maximum voltage of the cell is 4.2v and that the "nominal" (average) voltage is 3.7V. As the battery is used, the voltage will drop lower and lower until the minimum which is around 3.0V. You should see the number 3.7V written on the battery itself somewhere. How to charge a lithium ion battery? However, even with this protection, it is very important that you only use a LiIon/LiPoly constant-voltage/constant-current charger to recharge them and at a rate of 0.5C (1 Amp) or less. Like most lithium-ion packs, the batteries we sell do not have thermistors built-in. This is why we suggest charging at 1/2C or even less - 1A max in this case. What is a mAh lithium ion battery? This lithium-ion battery contains a 2200mAh and a protection circuit that provides over-voltage, under-voltage, and over-current protection. Yet, it is slim and easy to fit into many project cases. This cell can provide 2 C of peak current (4400mA).
