## EK Energy Storage Temperature Control Products

What is eco-EMS?The ECO-EMS series of products is an integrated energy management system designed for energy storage application scenarios The development of the new energy market has driven the development of the energy storage industry. Many industrial parks have begun to gradually invest in energy storage systems to achieve efficient energy utilization. Do cooling and heating conditions affect energy storage temperature control systems?An energy storage temperature control system is proposed. The effect of different cooling and heating conditions on the proposed system was investigated. An experimental rig was constructed and the results were compared to a conventional temperature control system. What is container energy storage temperature control system?The proposed container energy storage temperature control system integrates the vapor compression refrigeration cycle, the vapor pump heat pipe cycle and the low condensing temperature heat pump cycle, adopts variable frequency, variable volume and variable pressure ratio compressor, and the system is simple and reliable in mode switching. What is eco PCs?The ECO-PCS series product is a modular converter designed specifically for small-sized energy storage systems. It serves as a bidirectional energy converter The energy storage BMS solution supports two modes: a three-level architecture (BMU sub-control module + BCU main control module + BSU master control module) What is the energy saving rate of composite temperature control system?In Hohhot, the ACCOP of conventional air-cooled air conditioning is 4.1, while the proposed composite temperature control system reaches 5.1, and the energy saving rate is close to 25 %. Even if the proposed composite temperature control system is adopted in Guangzhou, the energy saving rate is still more than 5 %. Fig. 5. What is the COP of a container energy storage temperature control system?It is found that the COP of the proposed temperature control system reaches 3.3. With the decrease of outdoor temperature, the COP of the proposed container energy storage temperature control system gradually increases, and the COP difference with conventional air conditioning gradually increases.
