New energy storage power station business model

How to develop energy storage business model in China? In order to guide the development of energy storage business model, it is recommended to improve policy formulation in terms of planning, technical standards, market and regulatory mechanisms. In the planning stage of the power system, the Chinese government should consider the safety, economic and social benefits of energy storage. What is the implementation plan for the development of new energy storage? In January, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system. Are energy storage business models fully developed? Though the business models are not yet fully developed, the cases indicate some initial trends for energy storage technology. Energy storage is becoming an independent asset class in the energy system; it is neither part of transmission and distribution, nor generation. We see four key lessons emerging from the cases. What are the business models for large energy storage systems? The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day. What are the emerging energy storage business models? The independent energy storage model under the spot power market and the shared energy storage model are emerging energy storage business models. They emphasized the independent status of energy storage. The energy storage has truly been upgraded from an auxiliary industry to the main industry. Who owns the energy storage system? The grid subsidiary is the owner of the energy storage system. The third type is the third-party investment. Under this investment model, the energy storage system is invested and operated by third parties. With the further promotion of new energy generation, the electrochemical energy storage has been given more attention to. Its business model and economy affect the sustainable and healthy development of the industry. This paper described the functions of the energy storage in the power system, and the profit model of the energy storage power station was provided. The two business models, peak valley price difference model and two-part electricity price model, are proposed according to the profit model. As an example, the two business models of the 10 MW/40 MWh liquid flow energy storage are discussed, and the internal rate of return and static electricity price are calculated respectively. Finally, the reasonable suggestions are advanced. The research can provide a reasonable basis for the energy storage price setting and promote the development of large-scale energy storage.
