What is an uninterruptible power supply system (UPS)? To improve the efficiency of the power supply system, an uninterruptible power supply system (UPS) has been developed, which differs from the existing analogs, allows to reduce the peak power of the connected load, and is presented in Fig. 3.4 [25, 26]. Figure 3.4. Block diagram of the uninterruptible power supply system. How big is the uninterruptible power supply market? Based on organization size, the uninterruptible power supply market is divided into SMEs and large enterprises. The large enterprises segment held 54% of the market share and generated revenue of around USD 6 billion in . Why are uninterruptible power supplies important? Abstract: Businesses today invest large sums of money in their IT infrastructure, as well as the power required to keep it functioning. Uninterruptible power supplies (UPS) are an extremely important part of the electrical infrastructure where high levels of power quality and reliability are required. Which country has the largest uninterruptible power supply market? U.S. accounted for over 75% share in North America uninterruptible power supply market, generating revenue of USD 3.6 billion in . The US has the biggest national market of UPS systems, which have been prompted by the presence of key technology firms and advanced data facility build-up. What are the top 7 companies in the global uninterruptible power supply industry? Top 7 companies of global uninterruptible power supply industry are Eaton, Huawei, Vertiv, Schneider Electric, Delta Electronics, Riello UPS, ABB, collectively hold more than 55% of the market in . Eaton is the prominent leader in power management and full range UPS solutions to critical infrastructure. How do power supply systems improve efficiency? The efficiency of power supply systems is achieved through the use of uninterruptible power supply units installed at consumers of electricity. The unevenness of electricity consumption is the main factor that increases the cost of electricity generated, expressed in terms of fuel consumption at power plants.
