What is a photovoltaic-energy storage-integrated charging station (PV-es-I CS)?As shown in Fig. 1, a photovoltaic-energy storage-integrated charging station (PV-ES-I CS) is a novel component of renewable energy charging infrastructure that combines distributed PV, battery energy storage systems, and EV charging systems. Can photovoltaic-energy storage-integrated charging stations improve green and low-carbon energy supply?The results provide a reference for policymakers and charging facility operators. In this study, an evaluation framework for retrofitting traditional electric vehicle charging stations (EVCSs) into photovoltaic-energy storage-integrated charging stations (PV-ES-I CSs) to improve green and low-carbon energy supply systems is proposed. What is solar-thermal energy storage (STES)?Solar-thermal energy storage (STES) within solid-liquid phase change materials (PCMs) has emerged as an attractive solution to overcome intermittency of renewable energy. However, current storage systems usually suffer from slow charging rates, sacrificed storage capacity, and overheating tendency. What is a liquid-infused solar-absorbing foam Charger?We fabricate a liquid-infused solar-absorbing foam charger that can rapidly advance the receding solid-liquid charging interface to efficiently store solar-thermal energy as latent heat and spontaneously float upward to cease the charging process upon overheating. Can LPG foam be used to charge under concentrated solar illumination?When charging under concentrated solar illumination, the gravity-driven sinking of LPG foam enables ultrafast charging without safety concerns. How to calculate energy storage investment cost?The total investment cost of the energy storage system for each charging station can be calculated by multiplying the investment cost per kWh of the energy storage system by the capacity of the batteries used for energy storage.
